

# Using Bydureon (exenatide extended-release) pen

1. Let your pen come to room temperature

2. Liquid in oval window should be clear.

3. Attach needle to pen

4. Twist knob to CLICK  
(green label disappears)

5. Tap pen against hand 80 times or more. Keep needle upright.

6. Check to see that liquid is now mixed well (cloudy, without clumps).

7. Twist knob to CLICK (orange label disappears).  
Injection button pops out.

8. Remove needle cover.  
Inject in skin right away.  
Press and hold for 10 seconds.

9. Remove. Toss in red box.
